Web Tech Final Project

For this final project it is up to you to decide what you want to make. The main goal of this project is to include all of the HTML and CSS elements you have learned throughout this course.

List of things you must include:

- The right tags for the right elements e.g. <p> tags for paragraphs, <h> tags for headings etc.
- Lots of images of the topic/topics you are talking about using the <img> tag.
- An ordered and unordered list
- Lots of Hyperlinks to other websites. ()
- CSS used to style the document. This can be using colors, positioning or alignment.
- ID tags to select individual html tags.

Be as creative as you can be with the website! If you want to do something outside the box go for it! This is your blank canvass to create a website that you want to visit. If you get stuck on any of the tasks above ask a teacher and see if they can help!
